PRODUCTS USED

#10002-A Assy Truhold 5/8"

#10002-D Assy Truhold 7/8"

Guadalupe Church, Irwindale, CA

CHALLENGES

- Significant errors in anchor bolt placement causing delay and re-work
- Additional expenses for repair of anchor bolts

SOLUTIONS

- Tru-Hold anchor bolt placement holder

RESULTS

- No mistakes, no rework, less stress
- Significant labor cost savings

Rite On Concrete discovers the Tru-Hold® advantage

Thinx R&D Corp. Tru-Hold Anchor Bolt Holder yields serious cost savings to contractors

Project Overview

12,000 SF foundation, trash enclosure, and site work. The job required using extra number of/and large size anchor bolts. Value: \$400,000. Duration: 3 months.

Project Challenges

The projects biggest challenge was extra anchor bolt placement and the problems we face as a result such as re-work and repair. The job usually includes hanging the anchor bolts, utilizing the most widely used holder on the market, Anchor Mate, then dismantling each hanger after inspection only to be followed up with wet staking each anchor bolt. The conventional anchor bolt holders never keep the anchor bolt in place, taking more time to re-adjust, always checking to make sure that the anchor bolts don't fall into the trench. This process takes a lot of time - cleaning the thread and uninstalling the holder from the anchor bolt itself. So for this project, we expected to incur some reworking due to improperly placed anchor bolts.

Solutions

We utilized Tru Hold anchor bolt holders to hang all the anchor bolts for inspection and for pouring. The installation of Tru-Hold holders was easy and pretty self explanatory. We installed the anchor bolts, passed the inspection, and poured concrete with all the anchor bolts hung in place. There was no reworking; all the anchor bolts were installed straight and complete, no need to clean anchor bolt threads.

Savings Summary

Thanks to Tru Hold, we noticed significant savings in labor cost.
